Mosquito Authority

Franchise Decision Report

Source: 2025 FDD filed with Wisconsin DFI · Filing year: 2025
Legal entity: Main Line Brands LLC
Report generated: 2026-03-15 · Franchise Decision Radar

Executive Summary

Mosquito Authority is the lowest-cost franchise in the mosquito pest control cohort by a significant margin — both to enter and to operate. At $300K gross revenue, annual franchisor fees total $52,800 (17.6% of revenue), roughly $25,000–$33,000 less than any competitor. The system is the largest in the cohort (546 franchised outlets) with zero terminations across the 2022–2024 reporting window — the cleanest system health profile of any brand reviewed.

The biggest risk is latent, not current: the franchisor reserves the right to implement a national marketing fee of up to 3% of Gross Revenues at any time, which would add $6,000–$15,000/year. The predecessor entity's regulatory history (5 state actions for selling without registration) is real but pre-dates current ownership. Disclosure quality is strong, with a rich Item 19 — though a `#REF!` spreadsheet error and minor population mismatches are quality blemishes worth noting.

Decision Scorecard

Quick-read assessment across key buyer decision dimensions. Ratings reflect this brand's position relative to the mosquito pest control cohort.

DIMENSION	RATING	SUMMARY
Entry cost burden	**STRONG**	Lowest in cohort by a wide margin. $54K–$128K vs $120K–$220K for competitors.
Ongoing fee burden	**STRONG**	#1 at every revenue level. 17–18% of revenue vs 22–38% for competitors.
System stability	**STRONG**	Zero terminations across 3 years. Largest system (546 outlets) with lowest attrition.
Revenue disclosure	**MIXED**	Rich Item 19 (company-owned P&L + franchised revenue). But data is per-franchisee, not per-territory. #REF! error in key cell.
Disclosure quality	**MIXED**	#REF! spreadsheet error and minor population mismatches. Not fatal, but blemishes in a six-figure decision document.
Downside risk profile	**MIXED**	Latent 3% national marketing fee could add $6K–$15K/yr. Predecessor had 5 regulatory actions. Both manageable but real.
Buyer fit breadth	**MIXED**	Strong for budget-sensitive owner-operators. Weaker for passive investors or buyers needing high revenue visibility per territory.
Overall	**FAVORABLE**	Lowest cost + lowest risk profile in cohort. Best entry point for a first-time buyer willing to operate.

OVERALL POSTURE

Mosquito Authority is the strongest value play in this cohort for a buyer who will operate the business directly. The fee advantage is real and compounds over time. The system stability is exceptional. The main limitations are in disclosure clarity (per-franchisee not per-territory revenue) and latent fee risk. These are manageable unknowns, not disqualifying red flags.

Buyer-Fit Profile

Best fit for

- **Budget-sensitive first-time buyer:** Lowest entry cost and lowest ongoing fees mean you preserve more capital for the ramp period and keep more of every dollar earned.
- **Owner-operator:** The economics work best when you are the primary service provider in the early years. The company-owned P&L includes a $48K manager salary — if you operate yourself, that becomes your draw, not an expense.
- **Buyer who prioritizes low system risk:** Zero terminations and steady growth mean you are joining a stable system, not riding a growth wave that may recede.
- **Buyer comfortable with seasonality:** Mosquito control is seasonal (spring–fall in most markets). You need personal reserves or off-season income plans for winter months.

Weaker fit for

- **Passive or semi-absentee investor:** At single-territory revenue levels ($100K–$190K in early years), there is not enough margin to pay a manager and still generate meaningful returns. This is an owner-operator business until you scale to multiple territories.
- **Buyer who needs precise revenue projections:** The Item 19 gives averages per franchisee (not per territory), making single-territory projections an exercise in inference rather than direct lookup.
- **Buyer seeking rapid scale:** Authority's growth is slow and steady (+7/year), not explosive. If you want to grow fast, the franchisor's pace may feel conservative.

Proceed only if

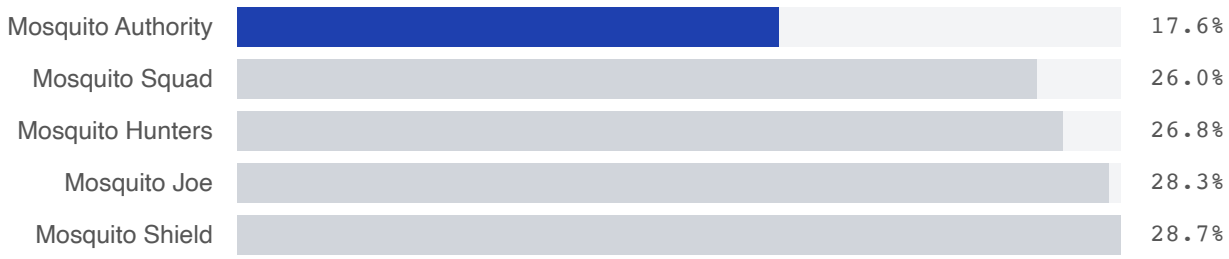
- You can sustain 6–12 months of personal living expenses without relying on franchise income (seasonal ramp risk is real).
- You have validated the latent 3% national marketing fee risk and are comfortable with the possibility of a $6K–$15K/year cost increase at any time.
- You have talked to at least 3 current single-territory franchisees about actual per-territory revenue — the FDD does not give you this number directly.

Fee Burden Analysis

Mosquito Authority has the lightest ongoing fee burden at every modeled revenue level. The primary driver is marketing: Authority's local ad minimum ($5,500 or 5%) is 4–7× lower than competitors' mandatory marketing floors ($37,500–$75,000+).

AT REVENUE	ROYALTY	MARKETING	TECH / OTHER	TOTAL	% OF REV	COHORT RANK
$200,000	$20,000	$10,000	$6,600	**$36,600**	18.3%	1/5
$300,000	$30,000	$15,000	$7,800	**$52,800**	17.6%	1/5
$400,000	$40,000	$20,000	$9,000	**$69,000**	17.2%	1/5
$500,000	$50,000	$25,000	$10,200	**$85,200**	17.0%	1/5

Cohort fee burden at $300K revenue



Total annual franchisor fees as a percentage of $300K gross revenue. Includes royalty, marketing, technology, and all mandatory recurring fees.

Component breakdown

- **Royalty (10% flat):** Mid-cohort rate. Minimum monthly fee ($700/mo by Year 7+) never exceeds the percentage at modeled revenue levels. (p. 15)
- **Marketing ($5,500 or 5%):** Proportional to revenue with a low floor. No active national fund. This is why Authority's total burden is so much lower — competitors pay $37K–$75K in fixed marketing obligations that hit hardest at low revenue. (pp. 15, 19–20)
- **Technology ($100–$1,200/mo, tiered):** Jumps in $100/mo steps per $50K revenue bracket. At $300K: $400/mo ($4,800/yr). At $500K: $600/mo ($7,200/yr). The escalation is predictable but not obvious from the headline rate. (pp. 16, 21)
- **Website/digital ($250/mo):** Fixed. Covers local site, SEO, review tools. (p. 15)

> **What this means:** At $300K revenue, you keep ~$247K after franchisor fees. The next cheapest brand (Mosquito Squad) leaves you ~$222K. That $25,000/year gap compounds over a 10-year franchise term into a quarter-million dollars of difference in retained earnings.

> **LATENT RISK — UNIMPLEMENTED NATIONAL MARKETING FEE**
>
> The FDD reserves the right to implement a national marketing fee of up to 3% at any time, adding $6K–$15K/year. No timeline or conditions are specified. If activated, Authority's burden rises to 20–21% of revenue — still lowest in cohort, but the gap narrows significantly. (p. 15, Note 4)

Item 19 Interpretation

Authority's Item 19 is the second-richest in the cohort, providing both a company-owned P&L and detailed franchised revenue distributions. This is more than most competitors offer — but it requires careful interpretation.

Company-owned P&L (Part 1)

One company-owned territory in Hickory, NC, operating since 2009. Full P&L for 2023 and 2024:

- Revenue: $374,420 (2023), $384,192 (2024)
- EBITDA: $71,691 (2023), $52,578 (2024)
- **Net income: −$6,852 (2023), −$30,411 (2024)**
  The negative net income is driven by $60,000/year in amortization. Before amortization and depreciation, the location is profitable. But the EBITDA decline from $72K to $53K is a real signal — expenses grew faster than revenue.

What to be careful about: This is a single location that has operated for 15+ years. It pays 10% royalty and ~10% in advertising (matching franchisee obligations). It is not representative of a new operator's first years. The manager salary ($48K/year) is included in expenses — if you operate the business yourself, that cost becomes your draw, changing the economics significantly.

Franchised revenue (Part 2)

Average gross revenue of $464,600 across 128 qualifying franchisees (506 territories). But this is **per franchisee, not per territory**. The average qualifying franchisee owns approximately 4 territories. A single-territory operator should not assume $465K revenue.

The revenue-by-years-active breakdown is more useful: franchisees with "at least 2 full seasons" average $149,470 (median $97,460). Those with 4+ seasons average $192,574. Revenue grows

meaningfully with tenure, but the early years are significantly lower than the headline average suggests.

What's missing

No franchised cost data or profitability. No per-territory revenue. The `#REF!` error in the 10+ Full Seasons cell (p. 55) means the most experienced cohort's average is missing from the filed document.

> **What this means:** You can estimate likely gross revenue from the years-active data ($100K–$190K in early years, growing with tenure), but you cannot estimate profitability from this FDD alone. The company-owned P&L gives cost ratios but from a 15-year mature location that is not representative of a new operation. You will need to build your own expense model or talk to current franchisees.

Per-territory triangulation

The FDD reports average revenue per **franchisee** ($464,600), not per territory. The qualifying population is 128 franchisees operating 506 territories — an average of 3.95 territories per franchisee. This ratio is critical.

Implied per-territory revenue: $464,600 ÷ 3.95 = ~$117,600. This is a rough average, not a disclosed figure — the FDD does not break revenue down by territory. But it aligns with the years-active data: franchisees with 2 full seasons show a median of $97,460 and an average of $149,470. The implied per-territory figure ($118K) falls squarely between these.

The revenue-by-territories-owned table (p. 54) adds another signal: franchisees in the $100K–$250K revenue bracket own a median of 4 territories. That implies $25K–$63K revenue per territory at the lower end. Franchisees earning $500K+ own a median of 5 territories, implying $100K+ per territory — but these are the most established operators in the system.

> **What this means:** A realistic single-territory revenue expectation for a new operator is likely in the $60K–$120K range in early years, growing toward $120K–$190K with 4+ seasons of operation. The headline $465K average is not achievable with one territory. This does not make the franchise uneconomic — it means single-territory economics are modest, and the path to meaningful income likely involves expanding to multiple territories over time.

Buyer-Side Economics Reality Check

Important framing: This is not a profitability forecast. It is an illustrative scenario exercise designed to help you think about buyer-side economics. The FDD does not disclose franchisee profitability. These scenarios combine FDD-disclosed revenue data with a cost-of-goods ratio

derived from a single company-owned location. Your actual results will depend on your market, your operating costs, and your execution.

SCENARIO	REVENUE	FRANCHISOR FEES	EST. COGS	REMAINING
Conservative (Year 2–3)	$97,000	$17,751 (18.3%)	$22,310	**$56,939**
Moderate (Year 4+)	$193,000	$35,319 (18.3%)	$44,390	**$113,291**
Mature proxy (company-owned)	$384,000	$66,408 (17.3%)	$88,320	**$229,272**

Revenue from Item 19 years-active data. COGS at 23% (derived from company-owned P&L, Hickory NC). Franchisor fees from fee burden model. 'Remaining' must still cover: vehicle costs, insurance, storage, office/admin, personal taxes, and your living expenses.

What the scenarios tell you

Conservative (early years): At median Year 2–3 revenue ($97K), the remaining $54K after fees and COGS must cover all your other operating costs and your living expenses. This is tight. If your non-fee operating costs run $25K–$35K (vehicle, insurance, supplies, misc.), your effective owner draw is $19K–$29K before taxes. This is why personal reserves and off-season planning are critical.

Moderate (Year 4+): At the 4+ season average ($193K), the economics shift meaningfully. After fees and COGS, you have $111K remaining. After typical operating costs, an owner-operator draw of $50K–$70K is plausible — but not guaranteed. This revenue level is an average, not a floor.

Mature proxy: The company-owned location at $384K is a single territory that has operated for 15+ years. After adjusting for franchisee-rate fees (not the 10% marketing the company-owned location pays), the remaining $230K covers operating costs with room for meaningful owner income. But this represents a ceiling case, not a typical outcome.

> **THE REAL QUESTION**
>
> Low franchisor fees do not automatically equal attractive owner economics. At $100K revenue, Mosquito Authority's fee advantage over competitors (~$15K–$25K/year) is real — but the total revenue base is small. The advantage compounds as revenue grows: at $300K, you keep $247K after franchisor fees vs $214K–$222K at competitors. The economics case for Authority depends on your ability to grow revenue past the early-year trough.

What the buyer still needs to validate

- **Actual operating costs:** Vehicle fuel/maintenance, insurance premiums in your state, chemical costs in your market, storage rental, seasonal labor.
- **Revenue ramp reality:** Talk to 3+ current single-territory operators about their Year 1–3 revenue trajectory. The FDD averages obscure the variance.
- **Seasonality cash flow:** Revenue is near-zero in winter months in most markets. You need a cash reserve or income bridge for 3–5 months of limited activity.
- **Multi-territory path:** If single-territory economics are modest, at what point does adding a second territory make sense? What are the incremental costs?

Illustrative Payback Sensitivity

The table below shows how long it would take to recover your initial investment under different assumptions about annual owner draw (net income after all costs, fees, and operating expenses — but before personal taxes).

ASSUMED ANNUAL OWNER DRAW	LOW INVESTMENT ($54K)	MID INVESTMENT ($91K)	HIGH INVESTMENT ($128K)
$20K (conservative early years)	2.7 years	4.6 years	6.4 years
$50K (moderate, Year 4+ target)	1.1 years	1.8 years	2.6 years
$80K (optimistic mature operation)	0.7 years	1.1 years	1.6 years

ASSUMPTION SENSITIVITY

These payback periods assume a constant annual draw, which is unrealistic — real income ramps from near-zero in Year 1 to a steady state over several years. A more honest way to think about it: if you enter at the low end ($54K) and can sustain yourself through 2–3 years of modest income, the investment likely pays back within the first 4 years. At the high end ($128K), you need either a longer horizon or faster revenue ramp. The single biggest variable is how quickly you build a recurring customer base.

Investment Breakdown

Lowest in the cohort: $54,000–$127,700. The range is wide because two variables swing it: franchise type (Hometown $25K vs Full-Size $45K) and vehicle ($0 if you own a qualifying truck, $30K if not).

CATEGORY	LOW	HIGH
Initial Franchise Fee	$25,000	$45,000
Pre-Opening and First Year Marketing Package	$15,000	$25,000
Transportation Expenses During Initial Training	$1,000	$1,500
Computer Hardware and Technology Fees	$1,000	$2,000
Opening Inventory	$2,500	$5,000
Storage Facility for inventory and equipment	$0	$200
Vehicle	$0	$30,000
Customer Service Vehicle Outfitting Package	$4,000	$5,000
Insurance (annual premium)	$2,500	$4,000
Additional Funds for first three months of operation	$3,000	$10,000
Total	**$54,000**	**$127,700**

What to know about the major line items

- **Franchise fee ($25K–$45K):** Franchisor will defer up to 50% at 8% over 36 months — unusual flexibility. Some 2024 sales at $31.5K–$35K suggest room to negotiate. (p. 13)
- **Pre-opening marketing ($15K–$25K):** Mandatory branded package. May be reduced if existing franchisees operate nearby. At the low end, this is nearly 28% of total investment. (p. 22)
- **Vehicle ($0–$30K):** Late model white full-size pickup. Own one already and this entire line disappears — it's the single biggest swing factor in the range. (p. 22)
- **Working capital ($3K–$10K):** Only 3 months, which is conservative for a seasonal business with near-zero winter revenue. Plan for personal reserves beyond this. (p. 23)

> **What this means:** A buyer with a qualifying vehicle and the Hometown tier can realistically enter for ~$54K cash (or ~$41K with the fee deferral). A Full-Size buyer needing a vehicle is closer to $100K+. The investment range is real — your actual number depends on decisions you control.

System Health

Most stable system in the cohort. Modest growth every year (+5, +10, +7) with no rapid-open/rapid-close churn. For context: Mosquito Shield grew +140 in the same period but lost 128 outlets to terminations and closures. Authority grew +22 and lost 17. Different kind of growth.

YEAR	OPENED	CLOSED	NET	END COUNT
2022	7	2	+5	529
2023	14	7	+10	539
2024	18	10	+7	546

Zero terminations

No franchisee was terminated across the entire 3-year window — unique in this cohort. Closures are limited to ceased operations (2, 7, 7) and 3 non-renewals in 2024 (the first in the reporting period). Small numbers against 530+ outlets.

> **What this means:** The franchisor is not aggressively culling underperformers, and franchisees are not walking away. In a cohort where one competitor terminated 65 outlets in a single year, this stability is a meaningful differentiator.

Active resale market

37, 29, 37 transfers per year (~7% of system). In a system with zero terminations, transfers mean ownership changes with the outlet staying open. People are buying these franchises from existing owners — a signal that the business has resale value.

Minimal company-owned footprint

One location (Hickory, NC). A second (West Chester, PA) was briefly company-owned in 2023–2024, then sold back. The franchisor is not competing with its franchisees.

Risk Signals

Predecessor regulatory history

Five concluded actions — all against predecessor TMA Franchise Systems, Inc., not the current entity (Main Line Brands LLC, formed 2020):

- Maryland (2013): selling without registration
- Rhode Island (2013): selling without registration, $5K penalty
- Virginia (2015): selling without registration, $20K penalty
- Wisconsin (2016): selling without registration, $10K penalty
- Washington (2020): Assurance of Discontinuance (inherited)

Same violation, five states, seven years. This was systemic, not accidental. Under current ownership (since 2020): zero regulatory actions.

> **What this means:** The predecessor had a genuine compliance problem. The current entity appears clean, but the brand's regulatory history is disclosed in every FDD and will surface in any attorney review. Ask the franchisor directly what changed operationally — not just whether new management was installed.

Document quality

A `#REF!` spreadsheet error in Item 19 (p. 55) and minor population mismatches (129/508 vs stated 128/506). Quality blemishes in the filing, not fabrication signals — but worth noting in a document underlying a six-figure decision.

Entity and ownership

PE-backed (Susquehanna Private Capital). Straightforward entity structure relative to competitors — notably simpler than Mosquito Joe's 6-layer SPV chain. All five brands in this cohort are PE-backed; this is industry-standard.

Peer Context

Authority is the only brand in this cohort where you can enter for under $60K, operate with fees under 18% of revenue, and look at a system with zero terminations. It is not the most transparent (Squad's Item 19 is richer) or the fastest-growing (Shield added +140 units). But it is the lowest-risk, lowest-cost option by a clear margin.

Closest comparison: Mosquito Squad. Similar age, both PE-backed, both with solid disclosure. Squad has better unit economics data ($484K/territory) and the best company-owned P&L ($20.8M, 25.9% margin) — but costs 2× more to enter and $25K/year more to operate at $300K revenue.

Sharpest contrast: Mosquito Shield. Opposite profiles. Shield has the fastest growth (+140) but highest churn (65 terminations in 2023). Lowest royalty (8%) but highest local ad floor ($50K). Authority has higher royalty (10%) but the lowest total burden by far.

METRIC	MOSQUITO AUTHORITY	MOSQUITO HUNTERS	MOSQUITO JOE	MOSQUITO SHIELD	MOSQUITO SQUAD
System size	546	135	415	435	226
Investment range	$54K–$127K	$141K–$170K	$150K–$192K	$120K–$157K	$162K–$220K
Fee burden at $300K	$52,800	$80,300	$84,752	$86,000	$77,880
% of revenue	17.6%	26.8%	28.3%	28.7%	26.0%
3-year net growth	+22	+8	+43	+140	+3
2024 attrition	1.8%	0.0%	5.7%	11.1%	4.3%
Royalty rate	10%	10%	10/7%	8%	10/9/8%

Decision overlay

Lowest-cost entry	Mosquito Authority — $54K–$128K. Next closest is Mosquito Shield at $120K–$157K.
Lowest ongoing fee burden	Mosquito Authority — 17–18% of revenue at all levels. Gap of $25K–$33K/year vs next competitor at $300K.
Most system stability	Mosquito Authority — Zero terminations, lowest attrition, largest system. Steady but slow growth.
Best disclosure depth	Mosquito Squad — Per-territory revenue ($484K average), company-owned P&L with $20.8M revenue and 25.9% margin. Richest data set.
Best for first-time buyer	Mosquito Authority — Lowest risk, lowest cost, simplest entity structure. Easiest on-ramp.
Highest growth trajectory	Mosquito Shield — +140 net units in 3 years. But also 65 terminations in 2023 — growth masks churn.
Highest 'looks better than it is' risk	Mosquito Shield — Lowest royalty (8%) but highest local ad floor ($50K). Net burden is highest in cohort at low revenue.

Discovery Day Diligence Script

These questions are derived from specific findings in the Mosquito Authority 2025 FDD. Each includes context on why it matters and what to listen for.

1. The FDD reserves a national marketing fee of up to 3%. Under what conditions would you implement it, and what timeline are you considering?

FDD p. 15, Note 4. Not yet active but could add $6K–$15K/year.

WHY IT MATTERS

This is the single largest latent cost risk. If activated, it adds $6K–$15K/year and narrows Authority's fee advantage over competitors. A buyer needs to price this risk into their decision.

STRONG ANSWER SOUNDS LIKE

'We have no plans to implement in the next 2–3 years. If we did, it would be tied to a specific national campaign with measurable ROI targets.' Specific conditions and transparency.

WEAK / EVASIVE ANSWER SOUNDS LIKE

'It's in the FDD as a standard provision. We'll implement it when the time is right.' No specifics, no timeline, no criteria.

FOLLOW-UP

Ask whether existing franchisee advisory councils have input on this decision. Ask if it would replace or stack on top of local ad minimums.

---

2. The company-owned location in Hickory showed declining EBITDA ($72K to $53K) and negative net income both years. What's driving that trend?

Item 19 Part 1, pp. 51–52. Net income –$6.8K (2023), –$30.4K (2024).

WHY IT MATTERS

This is the only full P&L in the FDD. If the company-owned location's economics are deteriorating, it signals margin pressure that could affect all operators — especially a new one with less pricing power.

STRONG ANSWER SOUNDS LIKE

'The EBITDA decline was driven by [specific factor: new technician, call center beta costs, one-time expenses]. Here is what normalized profitability looks like.' Willing to walk through the expense categories.

WEAK / EVASIVE ANSWER SOUNDS LIKE

'Amortization makes the net income look bad — it's really profitable on a cash basis.' Deflects from the EBITDA decline trend, which is the real signal.

FOLLOW-UP

Ask for a breakout of the $244K total expenses. Specifically: what are the call center beta costs ($14K in 2024) and will franchisees bear a similar cost?

---

3. The Item 19 average gross revenue ($464,600) is per franchisee, not per territory. What is the average revenue for a single-territory operator?

Item 19 Part 2, p. 53. Average franchisee owns ~4 territories.

WHY IT MATTERS

A buyer looking at one territory cannot use the $465K headline number. The per-territory figure is likely $100K–$120K based on implied math. Confirming this directly affects your financial planning.

STRONG ANSWER SOUNDS LIKE

'Single-territory operators average around $[X]K in their first 2–3 years.' Specific number, willingness to share segmented data.

WEAK / EVASIVE ANSWER SOUNDS LIKE

'Most of our successful franchisees expand to multiple territories quickly.' Redirects away from the question — implies single-territory economics may not work well.

FOLLOW-UP

Ask how many of the 154 franchisees operate exactly one territory, and what their average revenue is.

---

4. There are 3 non-renewals in 2024 — the first in the 3-year reporting period. What happened?

Item 20, Table 3, p. 56. Zero non-renewals in 2022–2023.

WHY IT MATTERS

Non-renewals are a signal that some franchisees chose not to continue after their term ended. In a system with zero terminations, this is the only indicator of voluntary exit dissatisfaction.

STRONG ANSWER SOUNDS LIKE

'Two were retirements, one was a market that didn't develop as expected.' Specific, honest, willing to provide context.

WEAK / EVASIVE ANSWER SOUNDS LIKE

'Three out of 540+ is insignificant.' Dismissive. Even if statistically small, the trend change matters.

FOLLOW-UP

Ask if the non-renewals were in any particular geography or franchise type (Hometown vs Full-Size).

---

5. The predecessor entity (TMA) had regulatory actions in 5 states for selling without registration. What specifically changed in the compliance process under Main Line Brands?

Item 3, pp. 11–13. Actions in MD, RI, VA, WI, WA (2013–2020).

WHY IT MATTERS

Five state actions for the same violation over 7 years is a pattern, not an accident. You need to understand whether the root cause was fixed or just papered over by a corporate restructuring.

STRONG ANSWER SOUNDS LIKE

'We hired a franchise compliance officer, built a state-by-state registration calendar, and engaged outside franchise counsel. Here's our current registration status.' Structural changes, not just new management.

WEAK / EVASIVE ANSWER SOUNDS LIKE

'That was the old management team. We're a completely different company now.' Corporate veil language without describing actual process changes.

FOLLOW-UP

Ask to see proof of current registration status in the states where you plan to operate.

---

6. The technology fee tiers go up to $1,200/month at $1.05M+ revenue. Is there a cap, or will additional tiers be added?

Item 6, Note 10, p. 21. 12-tier schedule from $100–$1,200/month.

WHY IT MATTERS

If you scale to multiple territories, this fee scales aggressively. At $1M+ revenue, $14,400/year in tech fees is significant. And if there's no cap, future tiers could be added.

STRONG ANSWER SOUNDS LIKE

'$1,200/month is the current cap. We have no plans to add tiers. The fee covers [specific tools and services].' Clear ceiling and value justification.

WEAK / EVASIVE ANSWER SOUNDS LIKE

'The tiers are reviewed periodically.' Leaves open the possibility of unlimited escalation.

FOLLOW-UP

Ask what the tech fee specifically pays for — is it Dispatch Plus/FieldRoutes software licensing, or does it include any other services?

---

7. There's a #REF! error in the Item 19 table for 10+ Full Seasons franchisees. Can you provide the corrected average?

Item 19 Part 2, p. 55. Spreadsheet formula error in filed FDD.

WHY IT MATTERS

The 10+ season cohort (60 franchisees, 275 territories) represents the most experienced operators in the system. Their average is the most relevant benchmark for long-term economics, and it's missing from the filed document.

STRONG ANSWER SOUNDS LIKE

Provides the corrected number on the spot, or commits to providing it before you leave Discovery Day.

WEAK / EVASIVE ANSWER SOUNDS LIKE

'We'll have to look into that. It's in the next filing.' No urgency to correct an error in the document they're selling from.

FOLLOW-UP

If they provide the number, compare it to the median ($450,722). A large gap between average and median would indicate skew from a few very large operators.

---

8. What does the Hometown Franchise ($25K fee, smaller territory) look like in practice? How does revenue compare to Full-Size territories?

Item 5, p. 13. 62 Hometown franchises as of end 2024.

WHY IT MATTERS

Hometown is the cheapest entry point ($25K fee vs $45K). But if revenue potential is proportionally lower, the economics may not be better. You need this comparison to make an informed tier choice.

STRONG ANSWER SOUNDS LIKE

'Hometown territories average about $[X]K. They work well for [specific buyer profile]. Here's the territory size difference.' Concrete data and honest framing.

WEAK / EVASIVE ANSWER SOUNDS LIKE

'Hometown is a great option for getting started — you can always upgrade later.' Sales language without economics.

FOLLOW-UP

Ask how many of the 62 Hometown operators have upgraded to Full-Size, and what the upgrade process/cost looks like.

---

9. The West Chester, PA company-owned location was acquired in 2023 and sold back in 2024. What happened?

Item 20, Table 4, pp. 63–64. Short-lived company ownership.

WHY IT MATTERS

A franchisor briefly acquiring and then reselling a territory can mean several things: rescuing a struggling operator, testing a market, or flipping inventory. The motive matters.

STRONG ANSWER SOUNDS LIKE

'The previous franchisee wanted to exit. We acquired the territory to maintain service continuity and resold it to a qualified buyer within the year.' Operational rationale.

WEAK / EVASIVE ANSWER SOUNDS LIKE

'That's a routine territory transition.' Vague, avoids explaining why the franchisor itself had to step in.

FOLLOW-UP

Ask whether the resale price was higher or lower than the original franchise fee. Ask if this is something they do regularly.

---

10. Transfer volume is ~37/year (7% of system). Are these primarily retirements, upgrades to multi-territory, or something else?

Item 20, Table 2. 37 transfers in 2022, 29 in 2023, 37 in 2024.

WHY IT MATTERS

Transfer motive tells you whether the resale market is healthy (owners cashing out at a gain) or distressed (owners exiting at a loss). 7% annual transfer rate is high enough to matter.

STRONG ANSWER SOUNDS LIKE

Specific breakdown: 'About half are retirements or lifestyle changes, the rest are multi-territory consolidation.' Willingness to connect you with recent sellers.

WEAK / EVASIVE ANSWER SOUNDS LIKE

'People sell for all kinds of reasons.' No data, no specifics, won't facilitate introductions to recent sellers.

FOLLOW-UP

Ask for the average sale price relative to original franchise fee. If they won't share, ask recent transferees directly.

Source & Methodology

Source document: Mosquito Authority 2025 Franchise Disclosure Document, filed with the Wisconsin Department of Financial Institutions. 232-page regulator-source PDF. SHA-256:
`b3c79bd51cd531ec6e5c34297acd7118ba47d8a9418c1d5fec18c150fd4ab980`

Extraction: Structured data extraction using pdfplumber with manual review. Field-level provenance recorded (source year, state, page number, item reference). Extraction confidence: high (3+ fields spot-checked against source).

Fee modeling: Year 5 assumptions, single territory, 1 owner + 1 technician. Revenue distributed evenly across the year. All mandatory fees enforced. See fee_modeling_framework.md for full methodology.

Economics scenarios: Revenue estimates drawn from Item 19 data. COGS ratio is brand-specific (derived from available company-owned P&L data; see Economics section for derivation and assumptions). Scenarios are illustrative, not predictive. Operating costs beyond franchisor fees and COGS are not estimated — the buyer must validate these independently.

Peer comparison: Same methodology applied to all 5 brands in cohort (Mosquito Authority, Mosquito Hunters, Mosquito Joe, Mosquito Shield, Mosquito Squad). All from 2025 FDDs filed with Wisconsin DFI.

Disclaimer: This report is not legal advice, investment advice, or a recommendation to buy or avoid this franchise. It is a structured analysis of publicly available regulatory filings. The buyer should read the actual FDD, consult a franchise attorney, and conduct their own due diligence before making any investment decision. Economics scenarios are illustrative frameworks for buyer-side thinking — not profitability forecasts.
